

▶ Generating Efficiencies

Emtec helps Green Mountain Power implement an Oracle solution for greater operational efficiencies.

Emtec implements Oracle's E-Business Suite in four months, resulting in a better integrated, standardized, and simplified IT landscape. Purchase orders and invoices are created in hours instead of days at an 87% reduction in time. Financial results are now calculated in 5 days versus 15 - a 67% decrease.

The Challenge

Serving over 90,000 customers in the New England area, Green Mountain Power is an industry leader in providing eco-friendly power with exceptional reliability and responsiveness. Green Mountain Power replaced its legacy ERP solution with Oracle E-Business Suite to simplify the IT landscape and gain greater process efficiencies. Green Mountain Power required a solution that could:

- Automate business processes within project accounting and procurement to reduce manual touchpoints and associated errors
- Support the restructuring of separate groups into a centralized financial department
- Support quick upgrades and implementations of additional modules to support a growing customer base and business needs
- Eliminate the reliance on personal knowledge of custom code to maintain and reconfigure the system.
- Reduce system customizations and interfaces to minimize the number of IT resources required

The Solution

Green Mountain Power selected Oracle based on Oracle E-Business Suite's extensive list of functional modules and its ability to meet a significant proportion of its business needs right out-of-the-box. Green Mountain Power went live on the new system, including Oracle Financials, Oracle Project Management, and Oracle Supply Chain Planning in just four months through extensive planning and a collaborative environment. Green Mountain Power continues to work with Emtec as it increases its application footprint to exploit additional features of the system. Green Mountain Power also has upgraded to Oracle E-Business Suite 12. Key benefits included:

- Reduced time to process requisitions while gaining greater understanding of outstanding invoices and improved accuracy for payment forecasting
- Improved ability to allocate costs for specific project activities and capital assets using the project management system for such things as separating in-house labor costs and consulting services
- Gained ability to automatically associate various pay rates depending on hours worked and project roles, including pay categories, like overtime and storm pay
- Reduced time to close books with leaner finance staff through a centralized application and refined financial management processes

Established in 1964, Emtec, Inc. is a systems integrator that provides IT services and products to the federal, state, local, education and commercial markets. Our market leading value-based management methods, coupled with best-in-class IT technology, consulting and development services, address a wide range of specific client needs, as well as support broader IT transformation initiatives. Emtec's service capabilities span the United States, Canada and countries around the globe.
