

Oracle BI Analytics Assessment

Realize the ROI that you envisioned from your Analytics Implementation

Oracle BI Analytics (OBIA) is a powerful enterprise BI tool that allows companies to transform their transactional data into analytical information. Its ability to self-enable business users to retrieve data, with minimal or no help from IT empowers stakeholders and reduces the effective data-to-decision time. However, a successful OBIA implementation requires careful planning and flawless execution to take full advantage of this powerful tool.

Many times OBIA implementations fail to achieve the success that was envisioned at the start of the project. After spending hundreds of thousands of dollars, IT is not comfortable bringing the solution to production, and even if they were, the business often feels that they did not realize the expected ROI. There can be several reasons for these unsuccessful implementations, ranging from poor execution to lack of trust in data by business users. Some of the most common reasons we have identified are:

- **Lack of Business Involvement:** The business is not involved during scope and requirements definition. Therefore, the business's expectations are not met with the implemented solution.
- **Misalignment with Business Need:** Fit / gap analysis is not performed properly, so final solution does not fit the needs of business.
- **Lack of Trust in Data:** Business users are not actively involved in data validation, thereby creating a lack of trust in data.
- **System is not Scalable:** OBIA system is not designed to sufficiently handle the volume of data and number of users, thus causing lethargic performance. This discourages users from utilizing the system.
- **Poor Design of Semantic Layer:** The data model in OBIA is not designed correctly to assist business users with their analytical needs.
- **Too much Customization:** In some cases, the out-of-the-box solution is customized unnecessarily for one-off requirements making it very difficult and costly to maintain the system.

EMTEC TECHNOLOGY EXPERTISE

- Oracle Business intelligence
- Oracle BI Cloud Services
- Oracle Big Data Discovery
- Salesforce Wave Analytics
- Microsoft Power BI
- Enterprise DataWarehousing
- Oracle ERP Cloud
- Oracle HCM Cloud
- PeopleSoft FSCM
- PeopleSoft HCM
- EBS
- Hyperion EPM
- Planning & Budgeting Cloud Services

EMTEC SERVICES

- Advisory
- Strategy
- User Adoption
- BICC
- Implementation
- Managed Services

After many successful implementations of large-scale Oracle BI Analytics systems, Emtec is confident that we can help organizations see the ROI they expected in OBIA system by reviewing the existing OBIA systems and providing a roadmap to success.

EMTEC OFFERING

A three (3) week fixed fee engagement to assess the OBIA implementation and provide recommendations for improvements. This engagement will be split into two parts: technical evaluation and functional evaluation.

The following activities will be performed in each track:

- **Technical evaluation**
 - Architecture review
 - ETL and Data Warehouse review
 - RPD and Dashboards evaluation
 - Security review
 - Performance evaluation
- **Functional evaluation**
 - Data consumption
 - Business reporting requirements alignment

At the end of the engagement, the Emtec team will provide a detailed assessment of your current implementation with recommendations for improvement. The engagement will conclude with a presentation to stakeholders covering our findings and suggestions.
