

SERVICE OVERVIEW

Packaged Application Services
Oracle Business Intelligence

ABOUT EMTEC®

Emtec is the right size provider of technology-empowered business solutions for world-class organizations. Our local offices, highly-skilled associates, and global delivery capabilities ensure the accessibility and scale to align your technology solutions with your business needs. Our collective focus is to continue to build clients for life: long-term enterprise relationships that deliver rapid, meaningful, and lasting business value.

PACKAGED APPLICATION SERVICES

Emtec is a leading implementer of Packaged Applications. We help reduce costs by streamlining processes and providing application package expertise. We partner with our clients to provide subject matter expertise around the entire lifecycle of your application. Our specialty practices include, Microsoft Dynamics, Oracle Fusion, PeopleSoft, eBusiness Suite, Hyperion, and OBIEE.

- ERP
- HCM
- CRM
- BI
- Planning
- Financial Management

Oracle Business Intelligence applications deliver complete, integrated, highly scalable enterprise reporting solutions. OBIEE+ provides unsurpassed analytics and integration features, OBIApps combines data spanning enterprise sources and applications—empowering the largest communities with complete and relevant insight to everyone, not just analysts. All levels of the organization can see information optimized for their role.

IMPLEMENTATION EXPERTISE

Emtec's experienced consultants can get your enterprise reporting environment up and running quickly and efficiently. Our consultants can help you successfully implement:

OBIEE as Enterprise Reporting Solution

A common problem with any organization is that over a period of time, due to varied reporting needs, several reporting tools are implemented in various departments. In most cases, each tool is connected to a different data source. Not only does this pose a risk of "the multiple versions of the truth", but it also restricts users from viewing data across the organization. Emtec can help implement an enterprise reporting architecture based on OBIEE that will combine multiple data sources on a single, unified platform, hence eliminating the need for redundant reporting tools and provide a single view of data across the whole organization.

Oracle Business Intelligence Applications

Oracle Business Intelligence Applications (OBIA) is the answer to data access and insight delivery challenges. OBIA combines ERP and CRM data for timely insights that can lead to smarter decisions, better plans and more empowered workers. Emtec can help clients implement OBIA against their ERP and CRM systems including Oracle E-Business Suite, PeopleSoft Enterprise, Siebel CRM, and JD Edwards EnterpriseOne. We have successfully implemented several large scale OBIA projects and our esteemed ERP practice allows us to build cross-functional project teams that will ensure success through the complete lifecycle of the project.

OBIEE and Essbase Integration

With the advent of OBIEE 11g, integration of OBIEE and Essbase is more seamless and efficient than ever. In addition, the introduction of a new tool, Oracle Essbase Cube Builder (OECB), completely erases the lines between your ROLAP and OLAP environments. Emtec has been the beta partner of Oracle for this promising solution. OECB is the tool that completes the end-to-end Business Intelligence story for Oracle BI Products. With OECB, an OBIEE Repository containing all your source metadata can be loaded to an Essbase cube for multi-dimensional analysis. A seamless integration between OBIEE Dashboard pages and Essbase Smartview provides a simple and fluent user experience for moving between relational and OLAP data sets.

Migration from Brio and Discoverer

Customers of Brio (IR) and Discoverer can upgrade their reporting environment to OBIEE with the help of our OBIEE team. Our knowledge and expertise in Brio, Discoverer and OBIEE, will help you migrate Discoverer EUL and Brio metadata to OBIEE seamlessly and efficiently. Our experience will save you time and money.

OBIA Accelerator

With OBIA Accelerator, your company can take the first step to enterprise reporting for your ERP and CRM sources. This fixed-cost package allows for the deployment of a single analytical model with out-of-the-box dashboards and reports against your EBS, PeopleSoft, JD Edwards or Siebel source systems. The deliverables also involve testing, documentation and knowledge transfer to kickoff usage of the toolset within your organization. This implementation will build the foundation for further customizations to adjust OBIAApps to your company's needs, plus the addition of further modules.

Custom Training

We can help your organization develop an effective training strategy for the many diverse users in your organization. We will develop custom training material based on your environment that will help users understand the application better and increase adoption. Our Admin Class will train application administrators on how to perform routine tasks like RPD development; catalog management; security management; performance tuning and managing multiple development environments.

SERVICE OFFERINGS

OBIEE Accelerator

OBIEE Accelerator is for companies that are considering OBIEE but not sure how it will fit into their organization. This fixed-cost engagement will allow you to test drive OBIEE in your own environment before you commit to a larger investment. We will implement OBIEE against your multiple data sources and build reports and dashboards that will allow you to evaluate OBIEE against your own data. This will not be a throw-away implementation but can be expanded upon if you decide to implement OBIEE enterprise wide.
