- PeopleSoft HCM
- EBS
- Hyperion EPM
- Planning & Budgeting Cloud Services

OTBI allows business users to build powerful data visualization with real-time data from Oracle Fusion with the help of 9000+ reportable data objects. These data objects are organized into several functional areas. Report development is comparatively simple with OTBI, however it is very important that users are properly trained to use this powerful tool.

Emtec offers a short but every effective training course to all of all Fusion customers that provides hands on experience to business users and enables them to build their own ad-hoc analysis quickly and efficiently. This training program is divided into three small sessions that caters to the needs of basic users, super users and administrators of the system.

#### Basic Training - 2 Days

- Overview of Oracle Transactional BI
- Overview of pre delivered reports
